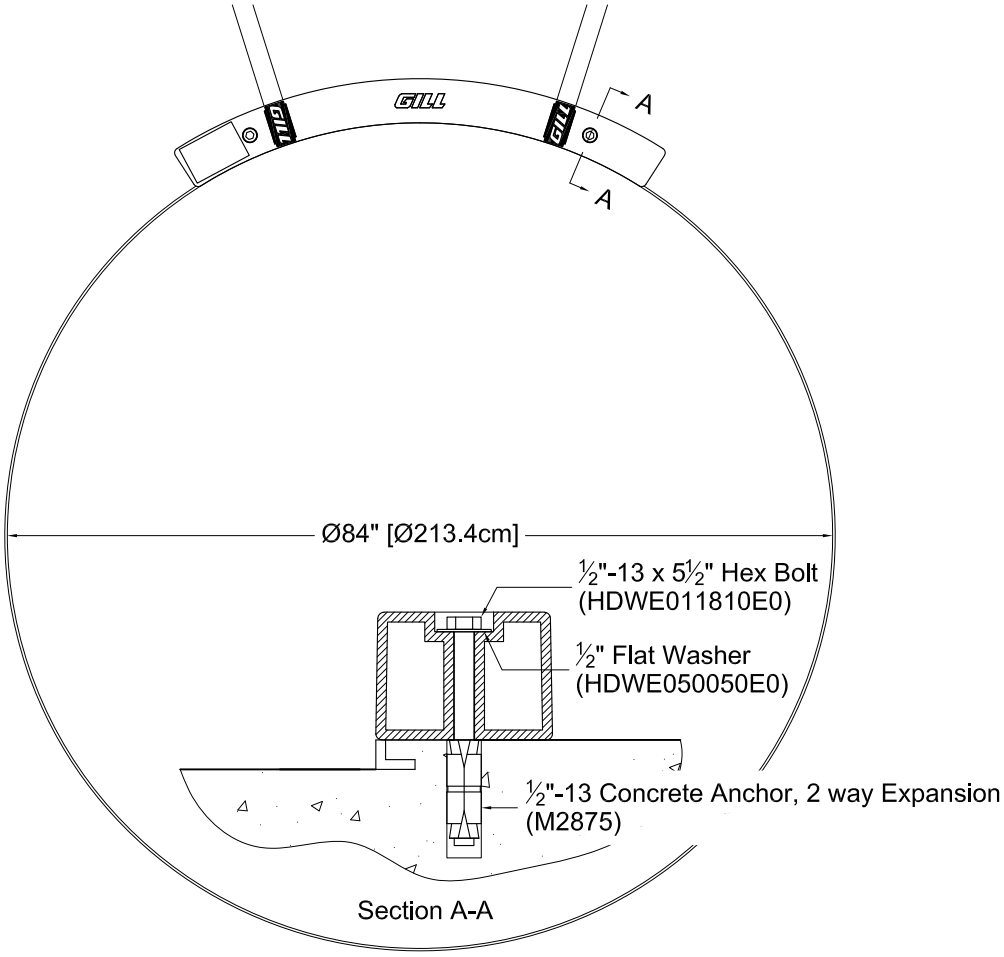
358 - SYNTHETIC TOEBOARD for RECESSED PAD INSTALLATION INSTRUCTIONS

INSTRUCTIONS FOR CONCRETE INSTALLATION

1. The 358 toeboard is mounted to a concrete pad with a 3/4" [19mm] depressed throwing surface.
2. Using the toeboard as a template, mark the center of the holes to be drilled for the bolt anchors. Be sure the toeboard is properly positioned with the inside curved edge of the toeboard even with the inner edge of the ring. The toeboard must also be centered on the sector lines.
3. Drill the Ø⅞" holes for the expansion anchor about 2¾" deep. Remove dust and debris from the holes. Tap the anchors into the holes with the threaded end first. The anchor should be flush with the top of the concrete. DO NOT drive the anchor to the bottom of the hole.
4. Position the toeboard with the holes aligned with the anchors. Place the ½" washer in the recessed hole. Insert the ½"-13 x 5½" hex bolts into the holes and, using a socket wrench, tighten the bolts down.

NOTE: Toeboard must be centered on sector lines



NOTICE

All installations should be done by experienced contractors and in accordance with all applicable codes, laws and regulations. Suggested installation instructions herein are illustrative only and should be adapted to suit local requirements.
