

1. Small Tears:

A.) For smaller tears in the vinyl, use the alcohol wipes and gray, self-adhering, patches.

B.) Repair the tear on the inside of the vinyl. Remove the foam and lay the area flat on the ground. Clean the area well with an alcohol wipe.

C.) Carefully remove the backing from the self- adhering patch, and place it on the tear area. It will stick tightly to anything it touches.

2. Large tears:

A.) For larger tears or holes in the vinyl or mesh, use the larger pieces of material and vinyl cement. The material may be cut to the size.

B.) Repairs should be made on the inside if possible. Cut the material to the required size, and follow the application instructions on the can. When finished, be sure to tightly reseal the can.
